- Projectors, White Boards, UCS and related software:  
800-RICOH-38 (800-742-6438).

## RICOH Envelope Jig For RICOH PRO C7200X Series

Ricoh USA, Inc. is pleased to introduce the new RICOH Envelope Jig customization for the RICOH PRO C7200X Series production color print engines.

### PRODUCT OVERVIEW

The RICOH Envelope Jig for the RICOH PRO C7200X Series is a customized accessory designed to enable productive printing of four-color flap closed envelopes via the RICOH LCIT vacuum feed tray. The purpose of this customization is to enable customers to feed specific envelope applications with the flap closed in the LCIT by allowing key operators the ability to stack larger quantities of envelopes in the printer and reduce operator intervention. Both in-plant and commercial production environments will benefit from this short-run enablement tool designed to maintain envelope applications too expensive to outsource without the consistent quantities to invest in a dedicated envelope printing device.

### KEY FEATURES

*Some features listed below require additional options to function*

- Envelope JIG supports RICOH Pro C7200 Series
- Envelope JIG supports Flap closed printing only
- Envelopes supported at launch are as follows:
  - # 9 Envelope (3.78" x 8.78") Bulleted feature
  - #10 Envelope (4.25" x 9.5 ")
  - Window Envelopes (8.5" x 10.5")
  - Window Envelopes (5.75" X 8 ")
  - Envelope-US Open End & Booklet Envelopes ( 9" x 12")
  - landscape & portrait feed

### POSITIONING

The RICOH Envelope Jig should be positioned with customers and prospects as an enabler to help facilitate short-run production printing of envelopes and to minimize key operator intervention. Specifically, eliminating excessive time spent performing make-ready tasks, stopping the engine for re-loading media and quality assurance concerns. The RICOH Envelope Jig is a customization and requires installation and removal by the key operator on a job-by job basis.

It is recommended you offer this solution to customers that experience challenges in envelope printing and do not have the volume, space, or financial justification for a dedicated envelope production device. (i.e., Xante, etc.)

## CONFIGURATION REQUIREMENTS

- RICOH Pro C7200 Series
  - Pro C7100 Series, Pro C9200 Series, and Pro C5300 Series are not supported
- Vacuum Fed LCIT
  - Envelope JIG does NOT support main trays or auxiliary trays (long sheet feeder)

## LIMITATIONS

- Vacuum Fed LCIT
- Envelope JIG supports Flap closed printing only
- Edge to Edge Printing is not supported
- Face of Envelope can be printed only-this is due to potential glue damage-back side of envelope is not supported
- Duplex Printing of Envelopes is not supported
- No reduced click charge or separate meter is available for the Envelope JIG

## PRICING

Equipment Pricing can be found by accessing the pricing tools on RQuote.

## SERVICE TRAINING

Not required for Envelope Jig

If you have any questions regarding this or any other training, please visit the Ricoh Learning Institute web site or send an e-mail to [ricohlearninginstitute@ricoh-usa.com](mailto:ricohlearninginstitute@ricoh-usa.com).

## BROCHURES AND DATA SHEETS

As this is a customization, we will not be offering a brochure- rather we will offer the following resources:

- Customer presentation
- Installation Presentation
- Installation Quick Reference Guide
- Customer Installation Video.
