Step 2: [Close Window](#) when you are finished.

## Marks move when Preps uses shingling in a Prinergy workflow [ID: 82274]

Product: Kodak® Prinergy® Connect™ version 4 or later; Kodak® Preps® version 5.1.4 or later

Platform:  
Operating System: Microsoft® Windows® 2000 Server; Microsoft Windows Server® 2003

Reviewed:

### ► Symptom

When shingling is applied in Preps, the crop marks move with the page information. The customer does not want the marks to move.

### ► Cause

In the Preps software, the crop marks move with the page because crop marks are associated with pages rather than press sheets. If shingling or bottling is applied, this affects the crop marks as well. For some production methods, this movement of marks is undesirable.

### ► Solution

To accommodate all production methods, the Preps template file contains a setting that allows Prinergy users to choose whether or not crop marks move with the page information.

Disable the shingling of crop marks by following these steps:

**Note:** This procedure applies when Preps is used in Workshop (either through a job or from **Tools > Start Imposition Application**). If you are using Preps stand-alone (without Workshop), see the Preps Help for information about disabling shingling of crop marks.

1. Quit the Preps software.
2. Locate **AraxiPreps > Profiles > PrepsPrinergy**, and open the **PrepsPrinergy.cfg.template** file in a text editor.
3. Locate the line **-SHINGLECROPMARKS:YES**, and change it to **-SHINGLECROPMARKS:NO**.

**Note:** If the line does not exist, create it.

4. Save the file.

The crop marks no longer move with the page information when shingling is applied.
