

Streaks—Cylinder Bearers and the Forces of Pressure

Hello Green Printer and fellow Lithographers,

We are not discussing **Roller Streaks**, you can set/reset the Inking Roller train forever and you will not eliminate these Press Gear/Bounce Streaks that occur **precisely** half way around the cylinder circumference on the Plate/Blanket Cylinders.

The tell-tale signs are 2/ 3 streaks that appear on the blanket/plate cylinders and this is *crucial at first also as bright marks on the cylinder bearers that coincide*

Incorrect set rollers will not cause marks to appear on the cylinder bearers.

Until this problem is rectified, the *Forces of Pressure* will relentlessly destroy the case hardening of the steel cylinder bearers in those areas.

Regards, Alois
