

**Make your own Color and Tint Selector for Salesmen and Customers!**

Simply strip in the film Scale, to print in the scrap trim-out areas of press flats. This will provide sample tone sheets on your paper – using your inks.

**Master Guide in Photo and Strip Departments.**

- The ByChrome Percentage Scale on FILM provides the stripper with a master guide in selection of screens. Use it too, to match screen tints on re-runs.
- An ideal guide for determining printing values of halftones by comparing dot size to the film scale, and to the reproduction of the film scale.
- To determine the line ruling of a screen tint, lay the 40% value of each ruling in the Film Scale, over the screen being checked and at the same screen angle. The rulings are matched when **no pattern** is produced.
