Edit Mac Host File

You must know the root password for the Mac, IP address of the BS Server, and the name of the BS Server, to do this.
- open a terminal (via applications - utilities)
- type "cd /etc"
- type "sudo pico hosts"
- fill in the root password
- edit the file, add the BackStage Server IP address, "tab" enter the name of the BackStage Server
- close the file by hitting ctrl-x
- type "y" for yes
- hit return to save file as "hosts"

Sample host file:

\# Host Database
\#
\# localhost is used to configure the loopback interface
\# when the system is booting. Do not change this entry.
##
127.0.0.1   localhost
255.255.255.255   broadcasthost
::1   localhost
BS Server IP   *BS Server Name*
