

They are arranged side to side with minimum gap. Their front edge is made of wear-resistant material. Each slide is individually adjustable, forward and backward. The adjusting operations do not influence the position of neighbouring slides.

An ink film of exactly defined thickness is metered to the fountain roller at each ink zone. The maximum displacement is approx. 0.5 mm.

The width of the ink slides - 30 mm - corresponds to the distance between the adjusting keys used so far.
