

Erik,

I'm sorry that you resort to using insulting remarks..... Perhaps a sign you are losing the augment.

I make no apology for posting PDFs, many of the visitors to PPForum - can barely grasp the Fundamentals of Lithographic Printing, the PDFs are in response to the answers posted about the printing problem, while I agree with many of the answers, but need further explanation. Whereas you pontificate your ideas and prejudice about lithography, in doing so you spread misinformation.

So now we come to the gist, have you furthered the progression of lithographic printing? In my imaginary estimation the answer is NO all we have is the constant refrain of your experience of UV printing on Chambon Presses which are a basic type of press for producing a niche printing product, perhaps which contribute to your "imaginary understanding of lithography".

Goss Printing Press Co. Used a metal "Go/No Go Gauge for many years.

Raison d'être, for this forum, is the de-skilling of work force in the present day industry, 80% of the problems posted on PPforum would not have been a problem to my generation of skilled and technically educated workforce. The remaining 20% would have been answered by speaking to the technically qualified Plate/Ink and Paper Representative.

Regards, The Illustrious Alois Senefelder.
