

Heidelberg Rotaspeed offsets now run at 1500 usf

1500 units so far.
So far being just five years,
worldwide.

The RZO two-colour 28 x 40" is
the most popular Heidelberg
Rotaspeed offset. It's also fast
becoming the most popular offset
press of this size around the world.

It's this sort of hard fact that
makes sense in hard economic
terms. More and more printers are
now putting their trust (and their
money) in Rotaspeeds.

You've four basic models to pick
from. RON, single-colour built-in
delivery. ROH, single-colour,
extended delivery. RZO,
two-colour. RVO, four-colour. All
have outstanding Heidelberg design

features like five inking rollers of
different diameters that lay one fine
ink layer after another on the plate.
And you get top quality every time.
Day in, day out.

The maximum speed of the
single-colour models is 8000 sph.
For multi-colour models, it's
7000 sph.

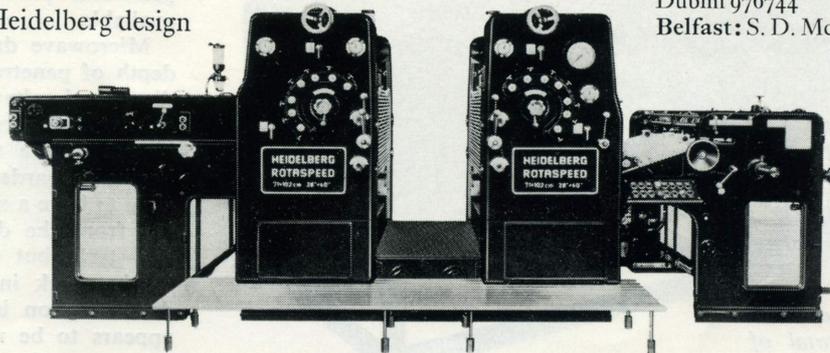

Rotaspeeds are produced on
stringently-controlled production
lines in the world's most advanced
plant. The kind of standardisation
that gives you quality-engineering
at a realistic price.

If you want the details, please
