*please contact your local  
newspaper for software  
version compatibility*

Please remember the settings and tips within this document are generic formats which are widely accepted and fall within the standards for quality reproduction. It is always a good idea to contact your local newspaper or printing facility for more information.

## ads

Good ads are well organized and use the basic principals of ad design: proportion, balance, contrast, movement and unity.

- feature a dominant element, such as a **logo or photo**
- use **white space** effectively
- use no more than **3 type faces**

## objective

Attract the readers eye by using **graphics and type**. Be sure the ad corresponds with the product and service you're advertising.

- grab the readers attention with headlines, type, white space, and visuals
- make copy interesting and benefit oriented
- answer the readers most basic question (what's in it for me?)
- urge reader to act now

## price-points/sales

Maximize ad presence by utilizing price-points and sales.

- ads that list 10-12 prices are noted 80% more often than those that list fewer than 7
- list too many and you risk confusing readers
- when advertising a sale be sure to advertise the sale prices
- ads with sale prices are noted 23% more often than sale ads without sale prices
- readers pay more attention to sale ads

## color

Color is a dramatic success in newsprint. Color ads draw 60% more in-depth reading than black and white and 40% more than spot color ads. Color is one of newspaper advertisers most powerful tools.

- color should be **CMYK** only
- full color scans should be saved as **CMYK/TIFF**
- spot or full color must be converted to process CMYK
- RGB, LAB, and INDEXED colors will be converted, and color reproduction will be as close as possible

## design/layout

Use **graphics, type, and white space** within your layout to help make your ad stand out.

- design your ad to direct the reader to the key feature

## graphics

All graphics should be clean line art, color or grayscale images.

- all art should be proper format, i.e. **TIFF, EPS, grayscale/CMYK**
- 100 LPI** for grayscale images
- illustrator files should have all fonts provided or converted to outlines
- set highlights to compensate for newspaper dot gain

## white space

White space attracts attention and gives the ad a frame to help it stand out.

- avoid butting text and images against borders
- keep headlines readable by utilizing white space

## type

Typography is a powerful tool, choose fonts that fit the product or service.

- avoid using more than three fonts in an ad
- avoid using decorative or script fonts for small type
- not all copy should be the same size or style
- only highlight focus information.
- supporting copy should be less prominent

## benefits

Good ads stop the reader from turning the page and tell what the product will do for the customer. They build a concept or idea as well as sell a product and its benefits rather than its features. Good ads promote the name of the store while creating a visual image for the store. It should speak to a specific group of people and provide all the facts a reader needs without providing too many. Effective ads convey their message simply and sell answers to consumers' current needs.

- Avoid overprinting black type on a background screen of more than 25%
- Avoid placing reversed type on a screened area with less than 70% black.
- Avoid small multicolor type or text reversed out of a four-color image area.
- Avoid screening fine or serif'd type styles

## typography

## Things To Remember

1. Every ad should have focus or benefit
2. Avoid small screened text in reverse
3. Keep it simple
4. Avoid distracting borders and typefaces
5. White space
6. Keep headlines short
7. Try and use fewer than 3 typefaces
8. Avoid all capped copy
9. Color sells
10. Avoid small serif style text in reverse

# ads on disk

contact your local newspaper for proper file format

3.5" floppy diskettes  
Zip 100/250 MB disks  
recordable compact discs  
jazz disks

## commonly accepted software

 Quark Xpress  Illustrator  
 Photoshop  Acrobat

*please contact your local newspaper for software version compatibility*

offset printing 85-100 line screen *black & white*

nondetail whites	0
highlight	2
quarter-tone	18
mid-tone	35
shadow	85

color	C	M	Y	K
nondetail whites	0	0	0	0
highlight	3	2	2	0
quarter-tone	20	14	14	0
mid-tone	38	30	30	10
shadow	60	50	50	80

## DISK AD SUBMISSIONS SHOULD INCLUDE:

- **a copy of your ad**  
in its native application program
- **All graphics** used in the ad.  
*(please place all artwork in a separate folder.)*
- **Hard Copy** Print-out of ad for reference. For color ads please provide a color proof as well as a separated proof.
- **All fonts** use in ad. **Type 1** screen fonts, Suitcase and Postscript printer fonts must be provided.  
*(Supply only Adobe Type 1 fonts. True Type Fonts and Multi Master Fonts are not accepted.)*  
*Fonts can not be substituted if they are a part of an EPS graphic. Please make sure fonts are converted to paths or outlines.*

## Color

Spot or full color **MUST** be converted to process CMYK. (color reproduction will be as close as possible) Full color scans should be **CMYK**. (**LAB, INDEXED, PANTONE, or RGB modes are not accepted**)

## Art & Graphics

All art must be included on disk, and saved in the proper format, i.e. TIFF or EPS with a minimum resolution of 200 dpi.

***(JPEG's should not be used)***

Please refer to our color reference chart for Gannett's color recommendations. If you build your ad with a color format other than CMYK you may not get the exact shade desired.

Please contact your local newspaper for preferred file format and version compatibility.

# advertisers guide to COLOR reproduction

Please note that this reference chart represents the Newspaper Association American (NAA) Ad-Litho colors. The chart is intended to be our primary color reference for color using a mix of the four process colors. Please use these colors when building ads.

0AA0 0AA0	1880 1880	04A0 04A0	A0A0 A0A0
1AA0 1AA0	0774 0774	03A0 03A0	8050 8050
0A50 0A50	3AA0 3AA0	02A0 02A0	8020 8020
0A00 0A00	0770 0770	01A0 01A0	A400 A400
0A10 0A10	1660 1660	00A0 00A0	A000 A000
1830 1830	0640 0640	2080 2080	A100 A100
1A00 1A00	0440 0440	4080 4080	7300 7300
3800 3800	06A0 06A0	6080 6080	AA00 AA00
5A00 5A00	15A0 15A0	8080 8080	5400 5400

If you build you ad with a color format other than CMYK you may not get the exact shade desired.

# reading the color code

## NUMERICAL COLOR IDENTIFICATION

All colors are identified by a four-digit number. Each number code is the combination of screen tint percentages used to produce a certain color. The first digit represents the amount of cyan. The second digit represents the amount of magenta. The amount of yellow is represented by the the third digit and black is specified by the fourth digit.

Colors developed with less than 10% intervals are not distinctively different when reproduced.

### EXAMPLE CMYK

A000/cyan = 100% cyan

0600/pink = 60% magenta

A0A1/green = 100% cyan and 100% yellow with 10% black

0=no color

1=10%

2=20%

3=30%

4=40%

5=50%

6=60%

7=70%

8=80%

9=90%

A=100%

# 2A83

The first digit in the code is the cyan dot percentage. The 2 represents 20% cyan.

The second digit in the code is the magenta dot percentage. The A represents 100% magenta.

The third digit in the code is the yellow dot percentage. The 8 represents 80% yellow.

The fourth digit in the code is the black dot percentage. The 3 represents 30% black.

# 2

20% CYAN

# A

100% MAGENTA

# 8

80% YELLOW

# 3

30% BLACK

# Adobe Illustrator

PLEASE CONTACT YOUR LOCAL NEWSPAPER FOR ILLUSTRATOR VERSION COMPATIBILITY

*It is important to save all illustrator files with the correct version compatibility. EPS's saved with the incorrect version can not be used.*

*Please supply all placed images and fonts with the final file*

*(fonts that are not supplied or missing will not be replaced.)*

# 10 Version

The image is a screenshot of the 'Save As' dialog box in Adobe Illustrator. The 'Compatibility' dropdown menu is open, showing a list of versions: Version 10, Version 9.0, Version 8.0, Version 7.0, Version 6.0, Version 5.0/5.5, Version 4.0, and Version 3.0/3.2. The 'Preview' section shows the format set to 'TIFF (8-bit Color)' and the 'Transparent' radio button selected. The 'Options' section has several checkboxes: 'Include Linked Files' (checked), 'Include Document Thumbnails' (checked), 'Include Document Fonts' (checked), 'Use Japanese File Format' (unchecked), and 'CMYK PostScript' (checked). The 'PostScript®' level is set to 'Level 2'. The 'Transparency' section has two radio buttons: 'Preserve Paths (discard transparency)' (unchecked) and 'Preserve Appearance (flatten transparency)' (checked). The 'OK' and 'Cancel' buttons are visible on the right side of the dialog box.

# Adobe Photoshop 7.0 Version

All settings are for both black and white as well as color ads.

Images should be saved EPS or TIFF.  
Resolution should be minimum 200 DPI.  
Line art (1 bit-images) should be saved at a minimum resolution of 1016 DPI.  
Please contact your local newspaper for accurate dot gain percentages.

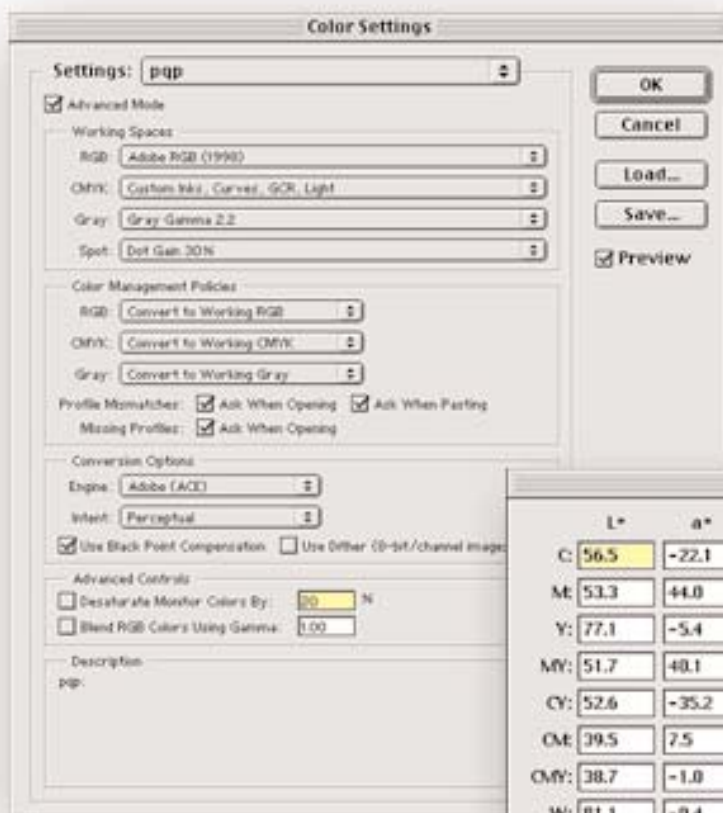

**COLOR IMAGES MUST BE SAVED AS CMYK.** *IMAGES SAVED WITH JPEG FORMAT, COMPRESSION OR ENCODING WILL PRINT BLACK AND WHITE. RGB, OR DUOTONE IMAGES WILL ALSO PRINT BLACK AND WHITE.*

## considerations •

-  proper illumination
-  sharpness/focus
-  clarity(absence of haze)
-  size
-  full tonal range
-  instant prints, copies, Xerox, or fax repros are not recommended
-  web art reproduces poorly and should not be used
-  CMYK... CMYK....CMYK

## color settings for optimal output •

### EDIT > COLOR SETTINGS

Working Spaces –

RGB: Adobe RGB (1998)

CMYK: Custom Profile (shown below)

GRAY: Gamma 2.20

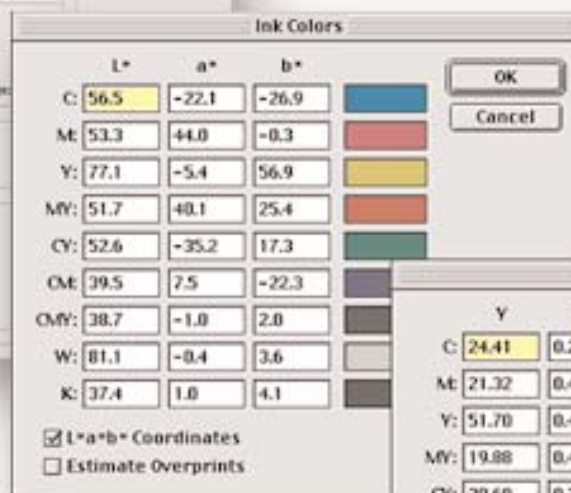

SPOT: Dot Gain 30%

## lab ink values •

### EDIT > COLOR SETTINGS

WORKING SPACES > CMYK

CUSTOM CMYK > INK COLORS > CUSTOM

Enter values accordingly for L\*A\*B\* and assure Yxy values correspond accordingly.

## custom dot curves •

### EDIT > COLOR SETTINGS

WORKING SPACES >

CMYK > CUSTOM CMYK

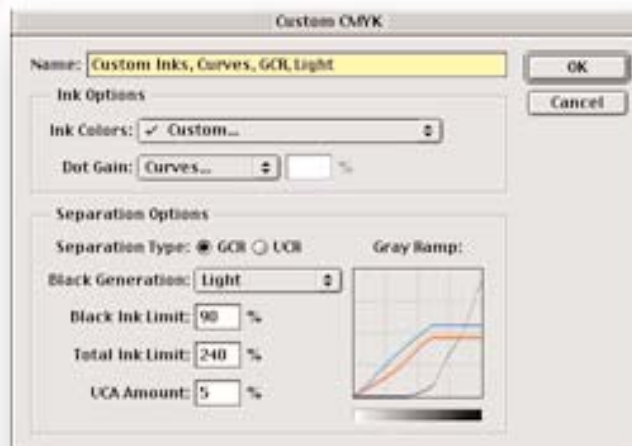

DOT GAIN > CURVES

Enter values accordingly for CMYK.

## custom cmyk •

EDIT > COLOR SETTINGS > WORKING SPACES > CMYK > CUSTOM

Separation Type–  
GCR

Black Generation–  
LIGHT

Black Ink Limit–  
90

Total Ink Limit–  
240

UCA Amount–  
5

## general tips for image reproduction

### original art •

Using photo copies, duplicates or preprinted material or web based art reduces quality in printed reproduction.

### photoshop •

Sharpness of the original photo will have the greatest impact on quality reproduction, however it may be beneficial to apply additional digital sharpness using the *Unsharp Masking* tool. (a noticeable black or white outline may appear if excessive sharpening has been applied)

### tone/contrast •

Art that has full tonal range from light to dark including non-detail whites (reflection from shiny surfaces) provide the best opportunity for quality reproduction. Backgrounds that provide contrast but are not reflective white optimize the effect of the full print range. (original art with excessive contrast, although visually appealing, is detrimental to optimum quality). Originals with extreme brights and darks lack detail in the halftones, resulting poor image reproduction.

### factors •

Proper front lighting on the subject matter along with uniform lighting on all subject matter will increase printed detail and maximize reproduction quality. (avoid mixed lighting conditions)

### size •

It is recommended to use large format originals (4x5) for optimum print quality.

*use of web art results in poor print reproduction*

*preprinted material may reproduce with a moiré pattern*

*optimum Unsharp Masking*

*excessive Unsharp Masking*

*excessive bkrnd. contrast*

*optimum bkrnd contrast*

*excessive haze*

*optimum clarity*

*lack of mid-tone detail*

*optimum use of full tonal range*

### total saturation •

Total ink saturation for process color material should be no greater than 240%. excess saturation will only result in plugged shadow areas and reduced shadow detail.

### convert •

Convert to **CMYK** last. Never convert back and forth between color models as detail will be lost with each conversion.

### dot gain •

Be sure to accommodate for dot gain in both b&w and color images. Contact your local newspaper for dot gain percentages

### digital cameras •

Digital camera files are widely accepted.  
Files supplied may be toned and corrected to ensure quality reproduction.

Contact your local newspaper for  
file format compatibility.

---

## gray bar

*for larger format color advertising neutral gray bar usage is highly recommended. the gray bar is an important element in quality reproduction and consistent printing.  
please contact your local newspaper for more information.*
