

Segmented Ink Blades

If Segmented Ink Blades are desired, *Welas* can supply laser cut ink blades designed as direct replacement for the solid blade on your press.

- Laser cuts are less than 0.025 mm (.001 inch) wide

Material thickness 1.5 mm (.059 inch)

- Length of slots are usually 40-50 mm (1.6 - 2.0 inches)
- Design customized for different presses.

Each segment can be adjusted individually.

- No alternation of ink fountain necessary.
- No buckling as with solid blades.
- Ink blades can be delivered with or without carrier.

Material is hardened carbon steel or stainless steel
